Profile

Highly motivated, self-taught, passionate of programming and testing. I'm a fast learner so I can adapt to new things pretty fast.

Education

Bachelor in Automation and Applied Informatics,
Faculty of Automation, Computers and Electronics 

2018 – 2022 | Craiova, Romania

Personal projects

I implemented 3 data science and machine learning apps using Python:

- **Dog breed detection** - A machine learning model capable of predicting the breed of a dog using a given picture.
- **Bulldozer Price Regression** - A machine learning model capable of predicting the price of a bulldozer.
- **Heart Disease Classification** - A machine learning model capable of predicting whether or not someone has heart disease based on their medical attributes.

And 2 web-scraping apps:

- **TESLA Stocks and Revenue** - An app that uses Tesla revenue scraped data and the library yfinance for stock prices from 2010 to present to create 2 graphs, one for revenue and one for stock prices.
- **IMDB movies web scraping** - The app scrapes movie data from an IMDB website. The extracted data will be converted into SQL and inserted into a MySQL database.

More details, some ReactJS apps and visual presentation can be seen on my website posted in the personal info section.

Skills

- | | | |
|--------------------------------|-----------------|----------------------|
| • Python/Selenium | • Testing | • Jira |
| • JMeter | • Postman | • REST API |
| • Git / Github | • MySQL/MongoDB | • JavaScript/ReactJS |
| • MachineLearning/Data Science | • HTML5/CSS3 | • C |

Languages

Romanian

English
