🪪 Profile

Highly motivated, self-taught and passionate of programming. I'm a fast learner so i can adapt to new things pretty fast.

🎓 Education

Bachelor in Engineering,   2018 – 2022 | Craiova, Romania
Faculty of Automation, Computers and Electronics ⎘

📁 Personal projects

I implemented 2 web scraping apps using Python:

- **TESLA Stocks and Revenue graph** - An app that uses Tesla revenue scraped data and the library yfinance for stock prices from 2010 to present. The data will be used to create 2 graphs, one for revenue and one for stock prices.
- **IMDB movies web scraping** - The app scrapes movie data from an IMDB website with the most popular 1000 movies. The extracted data will be appended into lists which will be converted into SQL and inserted into a MySQL database.

And 4 ReactJs apps:

- **Gaming Database** - An API based search engine. It has three sections: Popular Games, New Games and Upcoming games. The application is using windows date to dynamically adjust the API fetch.
- **Music Player** - A music player application that uses static data. The application is build from scratch, including the player itself, buttons and slider.
- **Recipe App** - A simple API based food recipes application.
- **Memory Game** - A very basic 4x3 pair memory game with League of Legends theme.

More details and visual presentation can be seen on my website.

🧠 Skills

Python		JavaScript	
HTML5/CSS3		Git / Github	
C		Databases
